SUMMARY

Product Designer with hands-on experience designing two live B2B SaaS products, from research to shipped UI. Improved one product's usability score from below average to above industry benchmark (SUS 38 to 70) by **testing with real users and backing every decision with data**. Comfortable working closely with engineers, with working knowledge of **ReactJS, HTML, and CSS**.

EXPERIENCE

UI/UX Designer, Neuronest AI Pvt Ltd *Jun 2025 - Dec 2025*
Coimbatore, India

- Owned design end to end on **two live SaaS products** at the same time: Diginest 2.0 (WhatsApp Business platform) and JuristBot AI (legal tech, owned solo).
- Turned Diginest 2.0's **14 scattered modules** into one consistent experience, backed by a reusable design system of **50+ components** (8px grid, Light/Dark mode, WCAG AA).
- Built responsive layouts and information architecture for Diginest 2.0 that work smoothly from desktop down to mobile.
- Found a flawed assumption in the Meta Ads module through usability testing, fixed it, and proved it worked: **SUS score up from 50 to 78.5**, task success up to **89%**.
- Redesigned JuristBot AI solo in a **3-week sprint**, onboarding, navigation, and core flows, reaching a **100% success rate** on every critical user flow tested.
- Cut JuristBot AI's feature access time from **30 seconds to 3 seconds**, raising its UX score to **8.6/10** after testing with 10+ users.
- Worked directly with engineers using ReactJS, HTML, CSS, and Git, so handoffs stayed clear and easy to build from.

UI/UX Designer Intern, CoderOne *Jan 2025*

- Designed interfaces and ran user research to improve everyday product experiences.
- Built wireframes and prototypes in Figma with a consistent, user-first approach.

PROJECTS

BrandOS, AI-Powered Brand Identity System, Figma, Miro *Feb - Mar 2026*

- Designed a decision-driven AI branding product end to end. Identified the real design gap beyond surface UI: users struggle to **commit to, justify, and feel confident** in creative decisions, not just generate output.
- Applied product thinking to architect a guided decision system: **Brand Memory** (context-driven inputs), **Smart Review** (comparison and reasoning), and **Direction Fit** (system-level evaluation), replacing guesswork with intentional, informed choices.
- Balanced AI and user control by designing limited choices, controlled regeneration, and step-by-step flows that prevent over-reliance on AI, reduce cognitive load, and build lasting user confidence.

SKILLS

Design Tools: Figma, Adobe Photoshop, Adobe After Effects, Canva

Research & Testing: Miro, Hotjar, Maze, UserBrain

Development: ReactJS, Git

Core Competencies: Product Thinking, Information Architecture, Design Systems, Interaction Design, Usability Testing, Stakeholder Collaboration

EDUCATION

Bachelor of Technology (B.Tech), Information Technology *Aug 2021 - Apr 2025*
K.S.R Institute for Engineering and Technology | CGPA 7.52/10

CERTIFICATIONS

Design Thinking (IBM) • UX Design (Accenture) • UI/UX Design (IBM) • Foundations of UX Design (Google) • MS Office Fundamentals (Govt. of Tamil Nadu)
